

Dr. Anthony Michaels is a nationally recognized leader in sustainability, innovation and environmental science across multiple business sectors and academic fields. He leads the efforts at AltaSea to build relationships with universities and entrepreneurs in support of its leadership role in creating a 21st Century Blue-Economy. He is the co-founder and managing director of Proteus Environmental Technologies LLC, a leader in the transition of technology innovations to scale, particularly in the Blue Economy. He is CEO of EVEA Farm Management, a new venture to create vertically integrated supply chains for organic crops and to use agriculture as a means to mitigate climate change. Previously he was CEO of Midwestern BioAg, Chief Scientist at Pegasus Capital Advisors, a large Private Equity firm, the founding Director of the USC Wrigley Institute for Environmental Studies and Chair of the Board of Directors for the Southern California Marine Institute in the Port of Los Angeles.
