

Mobility Hubs Design and Implementation Guide

Best Practices for Developing Mobility Hubs and Networks Throughout the SCAG Region

[SCAG's Mobility Hub Design and Implementation Guide](#) provides strategies for identifying and prioritizing potential mobility hub locations, designing and optimizing these spaces, securing funding for their development and implementation, and exploring partnership opportunities to ensure successful execution.

Mobility hubs are strategic locations for travelers to seamlessly connect with multiple modes of transportation in a safe, comfortable, and accessible environment. These hubs offer a diverse range of transportation options, encouraging sustainability by providing effortless access to public transit, active transportation, micromobility solutions, shared and ride-hail pick-up/drop-off points, and electric vehicle charging stations. Designed for user convenience, mobility hubs prioritize safe and easy access for all travelers, comfortable amenities, and protection from adverse weather. They enhance the overall travel experience by integrating cutting-edge transportation technologies and offering valuable services, including device charging ports, Wi-Fi, and real-time travel updates.

Mobility hubs are most impactful when implemented as part of an interconnected network, creating seamless access to diverse transportation services and supporting infrastructure.

Questions can be directed to Priscilla Freduah-Agyemang at agyemang@scag.ca.gov, or Sirinya Matute at matute@scag.ca.gov. For more information, visit [SCAG's Transit program](#).

Why Mobility Hubs?

Mobility hubs provide travelers with more transportation options and connections, improving individual travel experience while benefiting the built and natural environment. More specifically, they:

Support safe and convenient transfer between transportation modes.

Provide first/last mile connections to transit.

Promote mode shift.

Reduce vehicle miles traveled.

Improve mobility, especially for those with limited options.

Reduce greenhouse gas emissions.

Encourage placemaking.
